

PROFESSIONAL SUMMARY.....

2 years of experience in user interface design and full-stack software development with a speciality in creating products poised to add value to society, I understand how to solve complex problems and while understanding the needs of the end-users as it aligns with the business needs and the overall technical requirement. I'm an open-minded individual willing to learn and expand my technical abilities whenever I'm presented with such an opportunity.

CORE SKILLS

- Great understanding of core user interface/experience principles and ability to create basic aesthetic interface and prototype with Figma.
- Ability to translate User interface designs to responsive web pages with HTML, EJS, CSS and Javascript.
- Experience with creating single-page applications with React.
- High involvement with Node Js, Express Js to create RESTful APIs and querying GraphQL servers.
- General Knowledge of SQL and No SQL databases (MongoDB and MYSQL).
- Flexibility in working with libraries built for CSS, Javascript and React.
- Knowledge of online cloud services for deploying full-stack web applications.

PROFESSIONAL EXPERIENCE

BAMGEEKS TECHNOLOGY (remote) / DEC 2020 - SEP 2021 / WEB DEVELOPER

Duties and Responsibilities

- Attending standup meetings alongside product manager and development team to enhance understanding of client's business needs, end-user expectations and product timeline.
- Utilizing different HTTP libraries like Fetch API, Axios and Jquery to communicate with API endpoints.
- Creating consistent and easy to implement user interfaces using libraries SASS and materialize CSS.
- Creating user interfaces with React applications (next.js and gatsby).

Achievements

- Successfully created a full-stack web application for an African non-profit organization using (React context API, leaflet Js, Chart Js, Mapbox and MYSQL).
- Alongside my team, we created a React serverless loan credit web application using (Gatsby, AWS lambda, Node JS Mailer and MongoDB)
- Designed and fully implemented a customer dashboard system for a GPS tracking firm (EJS, Node Js, Fetch API)

#BUILDFORSDG ANDELA/FACEBOOK / AUG 2020 - NOV 2020 / SOFTWARE INTERN

Duties and Responsibilities

- Creating REST API endpoints with Django utilizing docker for containerization.
- Developing server rendering full-stack web applications with Ejs, Javascript, Node, MongoDB and utilizing serverless infrastructure like firebase for user authentication.
- Developing responsive email templates from scratch using HTML5 table tags and divs for proper rendering.
- Collaborate with other software developers and designers from different African countries.

Achievements

- Developed a full-stack book keeping web application (EJS, Google book API, Bootstrap and MongoDB).
- successfully submitted a responsive web landing page with user authentication feature (EJS, SASS and Firebase).

UNIVELCITY (Lagos,Nigeria)/ DEC 2020 - SEP 2021 / SOFTWARE TRAINEE

Duties and Responsibilities

- Designing aesthetic user interface with Figma and translate designs to responsive web pages using HTML, CSS and Javascript.
- Creating RESTful APIs and servers with Node JS and express Js Middleware.
- deploying web applications to cloud services and utilizing git for version control.

Achievements

- Successfully designed and deployed a to-do web application (Vanilla Javascript, Sass and Local Storage)
- Developed reusable javascript components for easy workflow (Vanilla Javascript)

EDUCATION

MASTER DEGREE (UK) / SEPT 2021 - Present

University of Stirling - MSc Business and Management

BACHELOR DEGREE (NIGERIA)/ JAN 2012 - MAY 2019

Fed. University of Agriculture, Abeokuta. : Plant Pathology

CURRENT PROJECT

A product research Chrome Extension targeting Jumia.com sellers (Biggest E-commerce company in Africa)
